SUMMARY

Data and Product Analyst with 4+ years of experience translating complex data into actionable business insights across fintech, education, and early-stage products. Delivered over $1M in efficiency and cost savings through product metrics, funnel analysis, experimentation insights, and executive dashboards built with SQL, Python, Snowflake, Power BI, Tableau, and Excel. Known for improving forecasting reliability, data quality, and decision speed — partnering closely with product managers, business stakeholders, and leadership teams to define KPIs and drive measurable outcomes.

SKILLS

Programming and Analytics: Python, SQL, Pandas, NumPy, Shell Scripting, scikit-learn
Databases and SQL: Snowflake, BigQuery, PostgreSQL, MySQL, SQL Server, Advanced SQL, Window Functions, Query Optimization, Dimensional Modeling
Product Analytics & Visualization: Tableau, Power BI (DAX), Funnel Analysis, Cohort Analysis, Retention Analysis, A/B Testing, KPI Design, Executive Dashboards, Matplotlib, Seaborn
Data Modeling & Pipelines: dbt, ETL/ELT, SQL Transformations, Airflow, API Integration, Databricks, AWS, GCP, Docker, Kubernetes, CI/CD, Terraform, Data Quality validation
Machine Learning and Modeling: Feature Engineering, Regression, Classification, Clustering, Model Evaluation, Drift Monitoring, MLflow, Anomaly Detection, Trend Analysis
Tools and Collaboration: Git, Linux, Jupyter Notebooks, RESTful APIs, Jira, Excel

PROFESSIONAL EXPERIENCE

Data Analyst ***Chicago Education Advocacy Cooperative, Chicago, USA*** **June 2025 - Present**

- Designed and standardized core KPIs across student engagement and intervention programs, giving leadership a consistent, reliable view of program performance.
- Built curated Tableau dashboards tracking intervention impact and student progress, directly improving how leadership teams allocated resources and prioritized programs.
- Analyzed student behavioral trends to surface early dropout risk signals, improving identification accuracy by ~12% over previous manual checks.
- Automated data ingestion pipelines from 6 partner schools, reducing weekly manual cleanup from ~6 hours to under 1 hour and shifting data refreshes from overnight to near-hourly.
- Designed Snowflake schemas and dbt models that cut reporting rework by 30% and enabled net-new metrics to be tracked across the organization.

Data Analyst ***Stripe, Chicago, USA*** **May 2024 – May 2025**

- Analyzed product usage and payment trends across 4–6 million daily transactions to explain customer behavior, identify conversion drop-offs, and surface actionable insights for product teams.
- Designed executive-facing Power BI and Tableau dashboards used by leadership to measure feature launch performance, adoption trends, and revenue funnel health.
- Partnered with product managers and business stakeholders to define metrics, align reporting requirements, and support data-driven feature launch decisions.
- Partnered with engineers to redefine event tracking schemas and metric logic, improving clean event coverage by ~18% and improving data reliability for downstream analysis.
- Improved product forecasting stability by refining behavioral feature sets and monitoring model performance drift using MLflow.
- Reduced reporting lag from 36 hours to ~6 hours, enabling faster decision-making for BI and leadership teams.

Data Engineer ***FIS, Chennai, India*** **Jan 2023 – Aug 2023**

- Delivered analytics-ready datasets and data marts from legacy systems supporting millions of records per batch, enabling reliable downstream reporting and dashboards.
- Optimized SQL queries powering business-critical reports, reducing runtime from minutes to seconds and lowering compute costs significantly.
- Delivered clean feature sets for fraud modeling that supported improved detection accuracy and risk analysis workflows.
- Partnered with product and compliance teams to define data requirements for risk analysis, audit readiness, and regulatory reporting.
- Created pipeline monitoring scripts and documentation that improved data reliability and reduced production failures.

Data Science Intern ***1Stop.ai, Chennai, India*** **Nov 2020 – Nov 2021**

- Cleaned and transformed datasets for ML experiments; built baseline classification and clustering models to support product decision-making.
- Built dashboards to present experiment findings and model outputs to mentors and stakeholders.
- Automated routine preprocessing steps using Python, saving manual effort for the team.
- Contributed to exploratory analysis that influenced which models moved forward into production workflows.

EDUCATION

MS in Computer Science **Central Michigan University, Mount Pleasant** **GPA: 3.78/4.0**
